11:05 AM **Protecting People and Property: Fortifying Building Safety with Ballistic, Blast, Storm Impact & Forced Entry Solutions**

As the number and volatility of threats to facility security and safety continue to escalate, protection is becoming paramount in the scope of today's facility design. Whether it's high-level protection from ballistics, blast, storm impact or forced entry, this course reviews the various protection levels, testing standards, best practices and the fundamental fenestration solutions which will fortify your building to protect people and property.

12:10 PM **Safety, Security, and Simplifying Access: Integrated Overhead and Access Control Solutions**

Modern commercial, industrial, and multifamily projects demand seamless integration between site access points and building systems. This course reviews how innovative proprietary systems can be adopted to create a comprehensive, safe, secure, and easy-to-use control system, from gate operators and barrier arms to interior keypads and overhead doors. Also discussed is how the technology platform connects the necessary hardware and software in a unified, scalable solution that enhances security and access control and simplifies access management across various building areas. Lastly, some real-world examples are presented to highlight these integrated solutions, showcasing the value of specifying compatible system components from a single source versus fragmented system parts.
